

DevOps Specialist Goals Summary

Compliance & Time Reporting

- Ensure 100% compliance with change, deployment, and release policies by integrating Jenkins and Jira.
- Use Jira automation to track time and approvals.
- Maintain audit-ready logs using robot accounts and scripts.

Efficiency Improvements & Innovation

- Refactor CI/CD pipelines to reduce build/deploy time by 60% using Jenkins, Artifactory caching, and parallel jobs.
- Drive Kubernetes PoC with GitOps and Helm for faster environment setup.

Teamwork / Collaboration

- Collaborate with QA, Dev, and SRE teams to resolve CI/CD issues.
- Set up integrated dashboards via Jira/Bitbucket for visibility.
- Share Jenkinsfile templates across teams.

Project Work

- Deliver DevOps support for critical projects with Jenkins + Bitbucket pipelines.
- Implement containerized deployment flows using Helm and Kubernetes.
- Track deliverables through Jira sprint boards.

Support These Initiatives

- Integrate Prometheus/Grafana/ELK for deployment monitoring and alerts.
- Add SonarQube and SAST to Jenkins pipelines.
- Set up rollback pipelines and artifact promotion flows.

Transition

- Document CI/CD workflows, Helm charts, and Terraform modules.
- Conduct knowledge transfers and onboarding for new team members.
- Automate routine jobs like cleanup and builds.

Increase Product Quality

- Introduce automated tests (unit, API, performance) into CI pipelines.
- Use SonarQube gates to enforce code quality.

DevOps Specialist Goals Summary

- Integrate Jira bug tracking with CI job results.

Decrease Product Defect Leakage

- Set up post-deployment checks using Prometheus and ELK.
- Shift monitoring left to catch issues in pre-prod.
- Maintain <5% defect leakage via gated release pipelines.
