

Promotion Justification & Self-Review

Name: [Your Name]

Current Role: DevOps Engineer

Proposed Role: DevOps Specialist

Self-Review Summary for Promotion

Over the past year, I have delivered measurable impact in the areas of DevOps automation, system modernization, and cross-team integration. My focus has been on increasing reliability, scalability, and security across the DevOps toolchain.

Key Achievements

1. End-to-End Migration Expertise

- Successfully led Atlassian Suite migration from RHEL 7 to RHEL 9 with a strong fallback strategy.
- Migrated over 100 VOBs from ClearCase to Bitbucket, improving version control and collaboration.

2. Cloud Modernization (Azure)

- Set up Kordoba runtime for Core24/KGS apps in Azure and built automated systems for transactions and parameters.
- Delivered GUI-based management interfaces for streamlined Azure operations.

3. Containerization and Microservices

- Dockerized multiple REST APIs, web GUIs, and microservices for deployment on Azure.
- Presented successful proof-of-concept implementations to stakeholders.

4. Scalable Repository Restructuring

- Reorganized TechGS and Kjavareports projects in Bitbucket, breaking down large monolithic repositories into 120+ maintainable modules.

5. Toolchain Integration and Automation

- Integrated Outlook mail server with Jira to support automatic issue creation.
- Designed reverse proxies for QA and JFROG, enhancing access control and system performance.
- Configured hostname and SSL certificates for secure Artifactory communication.

6. Secure Operations and Encryption

- Led encryption implementations across applications (batch encryption, SSL setups) to protect sensitive data.

New Responsibilities as DevOps Specialist

- Take ownership of enterprise DevOps architecture and drive adoption of GitOps, Infrastructure as Code (IaC), and CI/CD automation.
- Design and implement robust monitoring, logging, and alerting pipelines using Prometheus, ELK, or similar tools.
- Act as SME for Bitbucket, JFROG, Artifactory, and Azure-based deployments.
- Guide security-first DevOps practices by embedding DevSecOps into the SDLC.
- Mentor junior DevOps engineers and contribute to internal DevOps knowledge base.

Closing Note

As a DevOps Specialist, I am ready to scale my impact by designing secure, resilient systems and accelerating DevOps maturity across the organization. I am eager to lead modernization initiatives, enforce best practices, and provide technical direction on strategic projects.
